

Case Study: Advocating for science-based targets

By Perpetual Sustainability

12 September 2024

Trillium has set an interim target by the end of 2030 for 75% of the holdings of Trillium-advised larger cap-equity strategies to commit to set science-based targets for reducing their GHG

emissions. Towards the end of 2023, Trillium sent letters to 86 companies across their investment strategies that had not yet set science-based targets to encourage them to do so. Ten of those companies have since made public commitments to set science-based targets.

As of 30 June 2024, 67% of Trillium's investments in larger cap equity strategies had committed to setting a science-based target, up from 15% in 31 December 2019.

For more information see [Trillium's Q1 2024 Advocacy Impact Report](#) online.
